NTE3091 Optocoupler Photo SCR Output

Description:

The NTE3091 is an optically coupled SCR with a gallium arsenide infrared emitter and a silicon photo SCR sensor in a 6-Lead DIP type package. Switching can be achieved while maintaining a high degree of isolation between triggering and load circuits. This device can be used in SCR TRIAC and solid state relay applications where high blocking voltages and low input current sensitivity is required.

Features:

- Turn On Current (I_{FT}), 5mA Typical
- Gate Trigger Current (I_{GT}), 20mA Typical
- Surge Anode Current, 5A
- Blocking Voltage, 400V Gate Trigger Voltage (V_{GT}), 0.6V Typical
- Isolation est Voltage 5300V_{RMS}
- Solid State Reliability
